Dear Hiring Team,

I am a Technical Architect / Solutions Architect with 11+ years of experience architecting and delivering enterprise-scale distributed systems, event-driven microservices, and workflow orchestration platforms.

My core craft is Node.js, TypeScript, and NestJS, with deep experience in Kafka, RabbitMQ, Redis, Temporal, PostgreSQL, and API Gateway / BFF architectures. I lead solution design for government and enterprise platforms - defining scalable system architecture, mentoring engineering teams, and driving delivery from RFPs to production. I also work comfortably across Next.js, React, .NET, Java, and Python when the platform needs it.

In my current role at InTimeTec, I own architecture for complex event-driven platforms - including robotic mission orchestration across many NestJS microservices - as well as digital-government and data-pipeline programs. I focus on messaging topology, workflow orchestration, shared API contracts, reliability under failure, and the engineering practices that let other teams build safely on top of the platform.

I am based in Jaipur and open to Bengaluru, Delhi-NCR (Delhi / Gurugram / Noida), Hyderabad, Pune, and remote-India. I am currently employed with a hard 90-day notice period and am happy to align start dates with your hiring process.

I would welcome the chance to discuss how I can help your team ship reliable, scalable systems.

Thank you for your consideration.

Sincerely,

Nitesh Sharma
